

# Our Quality Guarantee

Member of the Euroclear group

We promise better decision-grade ESG data, auditable down to the revenue line and region.

OPEN AND TRANSPARENT ARCHITECTURE (CUSTOMISABLE)

40,000+ ISSUERS COVERED (EVERY GLOBALLY LISTED COMPANY)

QUANTITATIVE AND FACTOR-INVESTMENT READY

FLEXIBLE DELIVERY: API, SFTP, BLOOMBERG, SNOWFLAKE, FACTSET

300+ ESG FACTORS AVAILABLE

## More Detailed Products and Services

- We classify revenue into 2,300+ distinct business activities, capturing up to 70% more disclosed detail than providers that stop at a GICS-level 3 bucket.
- Our depth lets you isolate real economic exposure: e.g., distinguishing “vehicle autonomous control software” from generic “system software,” or separating LPG/propane distribution from broad “energy” lines.
- All activities map transparently to environmental/social good/neutral/harm, SDGs, EU Taxonomy, PAIs, climate and biodiversity flags, so you can screen, tilt, and explain results with confidence.

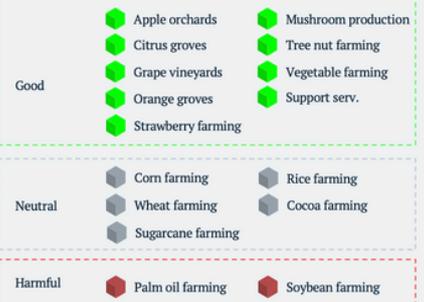

### Typical ESG providers

1 x Food crop production bucket<sup>1</sup>

Food crop production

### Impact Cubed data

19 Food crop classifications | Quantitative revenue data for each Mapped to UN SDGs

<sup>1</sup> Assumes use of GICs level 4. Impact Cubed can classify down to a level 7 GICs equivalent.

## Geo-revenue Intelligence

- Impact is location-specific. With data on both ‘revenue by sales region’ and ‘physical location of operating assets’, investors can reflect policy regimes, subsidy eligibility, demand durability, and transition/physical-risk context.
- Use this to spot long-term value (e.g., activities aligned with supportive policies), manage risk in loan books/collateral, and surface security-level opportunities (e.g., grid equipment in the U.S., clean-hydrogen services eligible for credits).

## Better, More Accurate Peer Groups

We build 18 name peer sets that align on:

- **What:** products & services mix
- **Where:** revenue dispersion by region
- **Size:** similar market-cap

For example, we wouldn’t mix a handset maker concentrated in one region into a global consumer-electronics peer set if the geo-revenue and activity profiles diverge. The result: more realistic comparisons for valuation & stewardship, cleaner screens, and benchmarks that reflect how businesses operate.

We’ve found Impact Cubed’s data to be **well-researched and reliable**. The platform is user-friendly and allows us to deliver transparent and effective ESG reporting.

We utilize their corporate factor data and **industry-leading SDG alignment data** to build robust client reports on a quarterly basis.

It’s time to expect more from your ESG data provider
